

Mohamud Mohamud

Junior AI Engineer | Agentic AI, Python, Automation

mohamud1961@gmail.com | +44 7909794942

SUMMARY

AI engineering contractor and workflow automation builder with hands-on experience designing agentic systems, evaluation loops, RAG workflows, and compliance-aware assistants. Strong in Python, structured outputs, and turning messy operational work into testable systems for regulated and internal-use cases.

EXPERIENCE

AI Engineering Contractor | Mercor | Apr 2024 - Present

- **Agentic AI Engineering:** Designed and tested agentic workflows with prompt systems, structured outputs, tool-use patterns, verifier-backed completion, and multi-turn execution.
- **Workflow Analysis:** Analysed reasoning, writing, classification, and tool-use workflows to improve consistency, reliability, and completion quality.

IT Asset Management Coordinator (EMEA) | Robert Half & Protiviti | Sept 2025 - Apr 2026

- **Asset Lifecycle & Reporting:** Managed EMEA asset lifecycle processes across procurement, deployment, refresh, and retirement while maintaining clean reporting across regional operations.
- **Automation & Validation:** Replaced manual reporting steps with Excel and Power BI workflows to reduce processing time and improve consistency.

AI PROJECTS

ResolveAI - Complaint Management AI Agent

- **Financial Services AI Workflow:** Built a policy-governed agent for retail-banking complaints, combining retrieval, structured reasoning, review gates, and compliance checks.
- **Evaluation Design:** Designed prompts and review criteria for grounded, policy-aligned outputs in a regulated financial-services context.

Aether - Agentic Evaluation Suite & Terminal-Based Coding Agent

- **Evaluation Suite & Terminal Agent:** Built an evaluation system for agent and harness variants against outcomes, failure modes, completion quality, and reliability criteria while developing a terminal-based coding agent focused on long-running tasks, tool use, context management, recovery, and verifier-backed completion.

SKILLS

- **Agentic Systems:** Python, RAG, prompt/context engineering, structured outputs, LLM evaluation, and tool design.
- **Technical Tools:** LangChain, LangGraph, Next.js, TypeScript, Supabase, PostgreSQL, Docker, and Vercel.
- **Professional Strengths:** Analytical judgment, structured written feedback, systems thinking, rapid iteration, quality assurance, and collaboration.

EDUCATION

BEng Hons Electro-Mechanical Engineering, 2:1, Coventry University, 2024
